Suggested Uses

Brite Wax is a combination of ingredients carefully chosen and blended for maximum effectiveness and minimal environmental concerns. It also contains rinsing agents and water-soluble surfactants that are all biodegradable, which eliminate water spotting by causing water to bead and run off rather than puddling. Beading effect on vehicle surfaces makes drying faster, even on cooler days when the performance of most drying agents decreases.

Brite Wax enhances and protects clear coat finishes with the added protection of an ultraviolet sun block additive, providing long-lasting beauty and protection to vehicle finishes.

Application

General Cleaning: Brite Wax is effective at dilutions up to 1 part concentrate to 700 parts water.

Brite Wash 75 is available in 4 litre, 20 litre, 205 litre containers.
